

William Lorenzo

Data Scientist | Machine Learning Engineer | AI Engineer

San Francisco, CA | (650) 255-1468 | ssfjdm@gmail.com

github.com/hiiwilliamss | linkedin.com/in/william-l-9347a7228

PROFESSIONAL SUMMARY

Data Scientist and AI Engineer with experience building machine learning models, clinical informatics workflows, geospatial data pipelines, and cloud-based analytics systems. Skilled in Python, SQL, TensorFlow, PyTorch, Scikit-Learn, AWS, NLP, statistical modeling, and data visualization. Applied project experience includes healthcare analytics, wildfire prediction, clinical trial analysis, and medical image segmentation.

EDUCATION

California State University, East Bay

2021 – 2026

B.S. in Statistics, Data Science Concentration

GPA: 3.82

Honors: Magna Cum Laude, Dean's List, National Society of Leadership and Success

TECHNICAL SKILLS

Programming	Python, SQL, R, SAS, C++, Java
Machine Learning	TensorFlow, PyTorch, Scikit-Learn, MLP, CNN, U-Net, ConvLSTM, GNNs, NVIDIA CUDA
Data Science	Pandas, NumPy, SciPy, Exploratory Data Analysis, Feature Engineering, Model Evaluation
Statistics	Regression, Classification, ANOVA, Hypothesis Testing, Statistical Modeling
NLP	Text Preprocessing, Tokenization, TF-IDF, Clinical Text Analysis
Cloud	AWS S3, Lambda, CloudWatch, Terraform, Microsoft Azure, ETL, Data Pipelines
Databases	MySQL, SQLite, Relational Database Design, SQL Analytics
Visualization	Tableau, Matplotlib, Seaborn, Excel
Tools	Git, GitHub, Jupyter Notebook, VS Code, Linux

TECHNICAL EXPERIENCE

AI Engineer & Lead Data Analyst, Interlinked

May 2025 – Present

AI-powered wildfire prediction and disaster response platform

- Lead data and AI initiatives supporting wildfire prediction, disaster response intelligence, and environmental analytics.
- Develop wildfire spread workflows combining Rothermel and level-set physics-based methods with machine learning surrogates.
- Implement U-Net, ConvLSTM, and Graph Neural Network architectures for spatial-temporal wildfire forecasting.
- Build training datasets from MODIS, VIIRS, fire perimeters, vegetation data, and historical incident records.
- Design AWS pipelines using S3, Lambda, and CloudWatch for scalable geospatial data ingestion, validation, and QA.

SELECTED PROJECTS

UCSF Clinical Trial Data Analysis using MySQL, NLP, and Machine Learning

May 2026

ResearchGate | Python, MySQL, SQL, NLP, Machine Learning, ClinicalTrials.gov Data

- Built a clinical trial informatics workflow using MySQL, SQL analytics, Python visualization, NLP, and machine learning to analyze UCSF-affiliated ClinicalTrials.gov data.
- Analyzed enrollment, interventions, sponsorship, study status, and trial phase trends; developed machine learning models to support trial phase prediction.

Myocardial Perfusion Segmentation with PyTorch U-Net

Mar 2026

ResearchGate | Python, PyTorch, U-Net, ResNet34, DICOM, NIfTI

- Developed a U-Net model with a pretrained ResNet34 encoder for myocardial perfusion image segmentation using DICOM and NIfTI data.
- Achieved a Dice score of 0.86 while evaluating data augmentation, class imbalance, and optimization strategies.

TensorFlow MLP for Heart Disease Prediction

Mar 2026

ResearchGate | Python, TensorFlow, Scikit-Learn, Pandas, NumPy

- Built a multi-layer perceptron for binary classification of heart disease risk using clinical data.
- Performed feature scaling, regularization, and model evaluation using accuracy, precision, recall, and F1-score.
